

MRAFIQ
TASK
MANAGEMENT
SYSTEM

INTRODUCTION

Mrafiq is a web-based Task Management System for organizing workforce operations.

Supports the full task lifecycle: creation, assignment,

Replaces manual, paperbased coordination with a centralized digital platform.

tracking, verification, and reporting.
Targets sectors like facility management, logistics, and field services.

PROBLEM STATEMENTS

Tasks are coordinated using paper, phone calls, and scattered messages.

Difficult to know who is working on what, where, and by when in real time.

Weak accountability: no clear audit trail for delays or incomplete work.

No historical data for analytics, forecasting, or process improvement.

Manual processes do not scale when workers, locations, and tasks increase.

SCOPE OF THE SYSTEM

Provide a centralized, role-based Task Management System accessible via browser.

Three main dashboards: Worker, Supervisor/Admin, and Owner.

Support bilingual (Arabic/English) interface to increase adoption.

Cover task creation, assignment, monitoring, completion, and reporting.

Include security, scalability, and usability as core non-functional requirements.

HARDWARE REQUIREMENT

Server / Development Machine

Multi-core CPU (Intel i3 or better), 8 GB+ RAM, 50 GB+ storage.

Runs Apache, PHP 8.x, and MySQL 8.x.

Client Devices (Owners, Supervisors, Workers)

Any modern browser on desktop, laptop, tablet, or smartphone.

Responsive UI allows workers to access the system in the field.

HARDWARE REQUIREMENT DEVELOPMENT ENVIRONMENT

Programming: PHP 8.x (OOP, MVC), HTML5, CSS3, JavaScript, jQuery.

Database: MySQL 8.x (InnoDB) managed with phpMyAdmin.

Frontend Framework: Bootstrap 5 for responsive design.

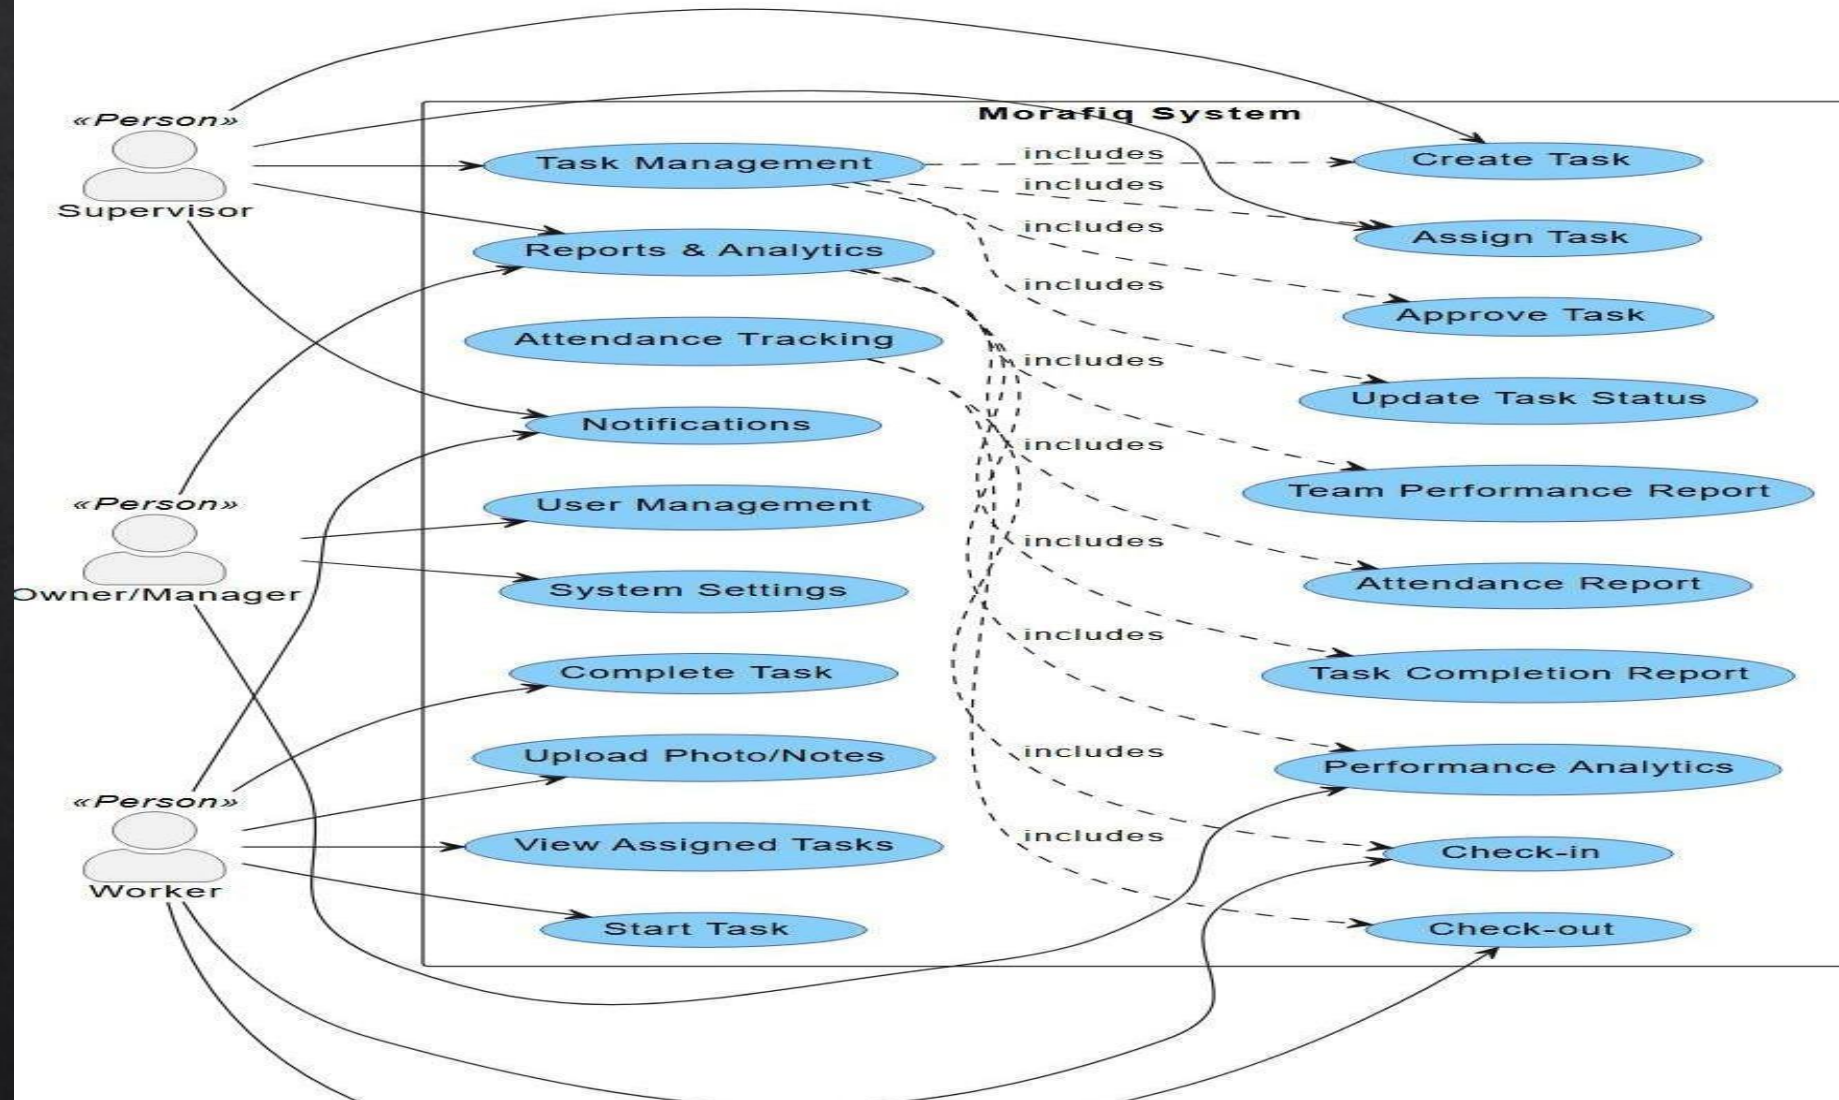

Charts: Chart.js for dashboard and report visualizations.

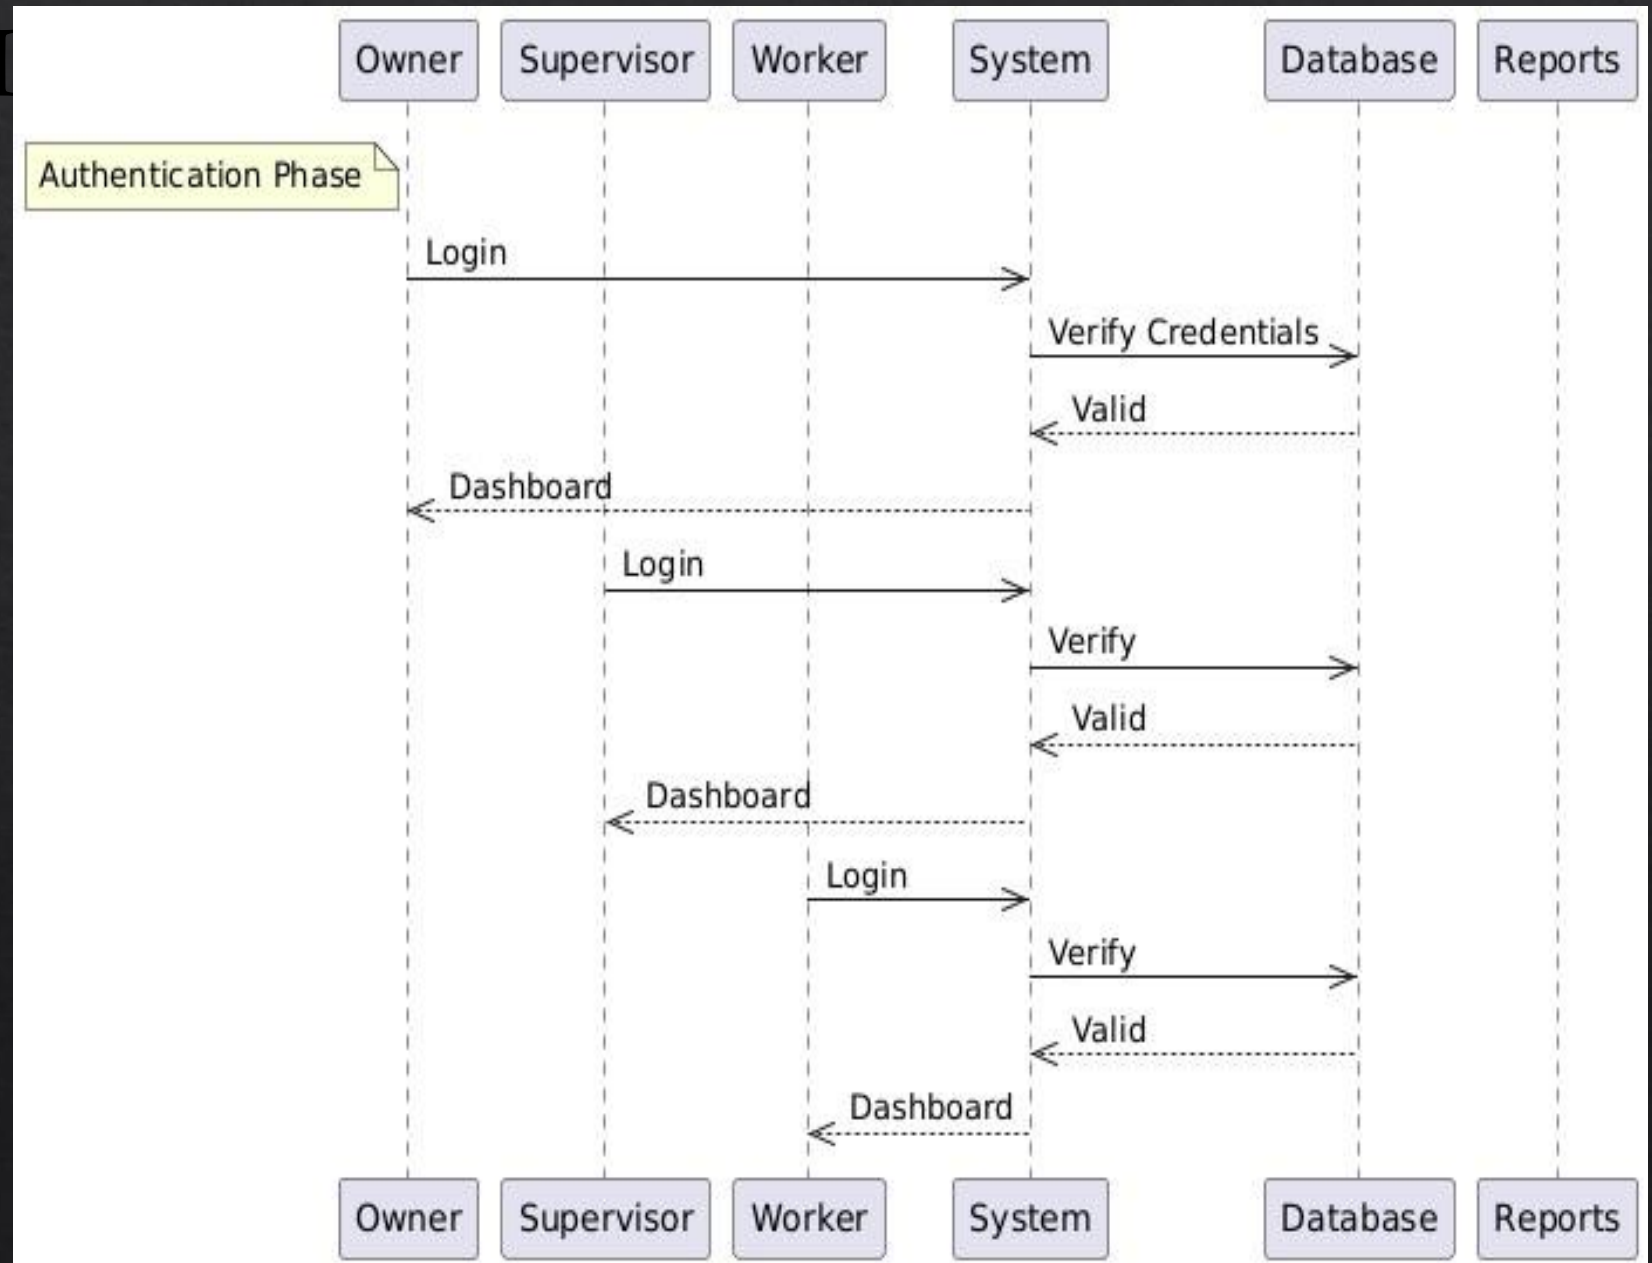

Tools: VS Code, Git/GitHub, XAMPP/WAMP for local development.

CONCLUSION

MRAFIQ DIGITIZES
MANUAL WORKFORCE
COORDINATION INTO A
SINGLE PLATFORM.

PROVIDES TAILORED
DASHBOARDS FOR
OWNERS, SUPERVISORS,
AND WORKERS.

IMPROVES
TRANSPARENCY,
ACCOUNTABILITY, AND
COMMUNICATION.

DEFENSEIN-
IMPLEMENTS
DEPTH SECURITY
(RBAC, HASHING,
PREPARED
STATEMENTS).

DEFENSEIN-OFFERS A SCALABLE
FOUNDATION FOR
FUTURE
ENHANCEMENTS AND
INTEGRATIONS.

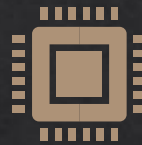

FUTURE WORK

Develop native Android/iOS apps for field workers.

Add advanced analytics and predictive workload forecasting.

Integrate with IoT sensors and external HR/university systems.

Support multi-tenant SaaS deployment for multiple organizations.

Introduce gamification to increase engagement and productivity.
